# Prepare For Tomorrow At The 2006 Summit

Be at our kickoff session on Monday at 11:45 am

### Here are some events and people you'll want to see at the Summit.

The conference **kicks off at 11:45 am on Monday**, September 11, with a highly entertaining game you won't forget, *Who Wants to be an FTTH Millionaire?*

We'll have food available, so head straight to the conference area rather than wasting time and money in a restaurant or by ordering room service - and be part of the activities right from the start.

**Free Subscription**  
[www.bbpmag.com](http://www.bbpmag.com)

Also slated for our opening session on Monday: **Michael Render**. Widely considered the nation's leading FTTH researcher - his work was used by the FCC in writing the rules on fiber - Render will be releasing exciting new research on **fiber's impact on property values and economic growth**. This is a don't-miss talk for real estate developers, property owners and managers, as well as economic development professionals, municipal officials and investors.

We have some *30 speakers and moderators in our multifamily sessions* alone, which run throughout the event from Monday through Wednesday. These sessions are all made up of industry leaders of national stature from the multifamily field, and many were on our list of Top 40 leaders. *We will be recognizing these leaders at our opening night reception on Monday. Be sure to attend*

Throughout the conference you'll hear about some of the country's most extraordinary new communities, where fiber is delivering the benefits of the future.

To keep readers up to date with the benefits fiber delivers and to show why we need all that bandwidth, we've launched *Killer App Magazine*, whose third issue you'll find after page 42. *Killer App will be sponsoring the opening session Tuesday morning.*

**2006 Summit**  
**September 11 - 13**  
**Dallas Marriott Las Colinas**

When we first introduced a discussion of applications at the Summit two years ago, we were in virgin territory. Now, awareness of applications is burgeoning, including in our advertisements. One of them asks: "Shouldn't every new home be connected with fiber?" The message goes on to say: "In the future, all communities will be connected with fiber, bringing light-speed downloads of music, gaming and instant messaging as well as video access to HDTV, video-on-demand and video conferencing. Home automation, medical monitoring and security systems will become standard options." Other ads speak about people with home offices who play video games and use DVRs, about serving residents who "don't remember a time without the Internet," and about homeowners who "blur the line between home and office" and "demand instant access to voice, video and data services."

At the Summit, you'll have a chance to learn about companies that have stepped into the future, and to hear from the companies that helped show them the way.
