Killer App Expo: Join The Leaders

To be held in Fort Wayne,
Indiana - April 30 to May 2

In the world of broadband today, one of the most exciting places you can go is Indiana – specifically the City of Fort Wayne. On my recent trip I discovered in even greater depth why the city hosts a steady stream of real estate developers, builders, property owners, economic development professionals, investors, and policy makers from around the country and the world who travel there to learn about the job-creating, business-attracting benefits of a broadband fiber optic infrastructure.

Broadband's Benefits

In Fort Wayne, visitors discover the very latest examples of how a community's communications capabilities can deliver benefits in the areas of education, health care, medicine, public safety, business communication, home security, entertainment, and scientific research. They also get to share in the vision that is shaping an even more extraordinary future as the power of next-generation networks transforms our lives and institutions.

For these reasons and more, we have chosen Fort Wayne as the site of our first Killer App Expo, April 30 to May 2 – see KillerAppExpo.com. At this first-of-its-kind event you'll experience the broadband revolution firsthand and see how Killer Applications are changing lives. You will see a wide range of new and cutting-edge technologies being deployed over high-speed broadband. You will also: Gain unparalleled access to today's hottest applications; get a preview of apps that will be reaching us in the future; network with developers, government leaders and technology providers.

The Expo will be held along with a Mayor's Summit attended by public officials from around the around the country. This special event will provide government leaders with an opportunity to learn about cutting-edge technology that

can help their cities be more competitive in retaining and gaining jobs. Officials will get up-to-date on technology breakthroughs in critical areas of municipal government, including public safety, infrastructure, community development, and environmental services. Attendees at the Expo will be welcome in the main sessions of the Mayor's Summit, where they will have the opportunity to hear government leaders discuss best practices from across the country.

The leader of the Mayor's Summit and co-host of our Expo is the dynamic Mayor Graham Richard of Fort Wayne, considered by many to be the nation's leading municipal broadband champion. His resourceful leveraging of the city's infrastructure is becoming a playbook for forward-looking city leaders everywhere.

Among the many areas on display will be the city's new smart home community, Renaissance Pointe, that blends the excitement of downtown living with the latest in new technologies. It is a gathering at which developers can identify new opportunities, spot trends in their field, and learn what local and regional municipal planners are seeking from the development community.

As a fiber-wired city that is committed to promoting digital innovation and investment, Fort Wayne is the best choice I can imagine to host the first Killer App Expo & Conference. The city will be welcoming public officials, businesses, health care providers, educators and consumers who want to learn what broadband access can do for them and their communities.

Be assured of a place at the table. Sign up now at KillerAppExp.com.
